

## Durability & Stability

Bamboo Flooring Hawaii, LLC's flooring is constructed with thin strips of Asian bamboo. After being cut into strips, the bamboo is then soaked, bleached and bonded with the highest quality finish. During this process, additional time and attention is made to help prevent insect and mildew damage, hereby producing a higher quality bamboo flooring on the market.

*Horizontal Natural Flooring*

*Horizontal Carbonized Flooring*

*Vertical Carbonized Flooring*

*Tropical bamboo Forest (Shanghai)*

*HORIZONTAL*

*VERTICAL*

Our finish is comprised of  
2 coats of UV protecting,  
one coat of premium

Aluminum Oxide, and

3 coats of scratch  
resistant polyurethane

Our bamboo flooring  
is durable and strong

as well as virtually  
maintenance free.

The end result is a  
gorgeous product that is  
on the average, 25%

harder than red oak,  
and approximately 10%  
harder than rock maple.

## Commercial Applications

Bamboo flooring is excellent for residential as well as for commercial use. The combination of beauty, durability and easy maintainance, makes it a smart choice for any business of prestige. Many fine businesses prefer our bamboo flooring for an elegant look that is both tropical yet contemporary.

*Horizontal Carbonized*

## Environmentally Friendly

Bamboo Flooring Hawaii, LLC manufactures and imports beautiful environmentally friendly bamboo flooring, an exceptional alternative flooring compared to other hardwood floorings. Bamboo is a grass that grows to maturity in approximately 5 yrs. In comparison, hardwood trees often reach maturity in 100 years or more before harvesting. In addition, it has been proven that bamboo absorbs carbon dioxide which depletes the ozone layer. Our bamboo is farmed explicitly for the purpose of manufacturing and is considered beneficial to our environment and its inhabitants..
