

Use Axle Doctors® for a safe, high quality steer axle eye or knuckle eye repair.

Saves your hard-earned money.

Because Axle Doctors® bore and sleeve steering axles on the truck, you save money in shop expenses and your truck is down for less time.

Safer because it is stronger.

Sleeves used by Axle Doctors® are thinner. By doing less boring of the axle eye or knuckle eye, more of your original axle is intact.

Makes you confident of a superior, long-lasting kingpin repair.

Only trained Axle Doctors® use patented, precision machines developed especially to restore your kingpin's original inclination angle. That angle is the key to saving tire wear. An axle bored incorrectly will increase your alignment costs.

Gives you an expert to repair any vehicle with a steering axle kingpin.

Axle Doctors® can safely and effectively repair kingpins and knuckles on vehicles from your pickup to your biggest off-highway earth mover.

Axle Doctors® is the kingpin division of Axle Surgeons. To find your nearest genuine Axle Doctors® with up-to-date training in patented Axle Doctors® practices, call 1-877-FIX-AXLE.
