Here's what we did for you today on your A/C System check up:

- 1 Checked all capacitors for proper operation
- 2 Checked all contactors for proper operation
- 3 Checked all electrical connections, inspected for arching or burns
- 4 Checked Freon level in condenser and adjust accordingly (R-22 =\$95 first lb, \$80/lb, R-410 =\$45 first lb, \$30/lb)
- 5 Checked all condensate drain pans and drain lines
- 6 Washed out condenser coils with water
- 7 Inspected condenser motor (Blow out condensate drain if necessary at an additional cost)
- 8 Checked Thermostat for proper function and battery supply (Asked customer if new settings are needed and set them)
- 9 Inspected Air Filter (HSA will supply a new filter at an additional cost)
- 10 If customer has a permanent filter, washed out filter
- 11 Wrote down model and serial numbers for all equipment on work order
- 12 Wrote filter size on work order
- 13 Noted Freon level, temperature drop, Return Air, Supply Air, Suction pressure, Low Pressure, High Pressure, and current temperature on work order
- 14 Noted overall performance of the HVAC unit on the work order

*Any batteries needed will be provided for customer at an additional cost

☐ Your system is working well at this time. If something goes wrong in the next 30 days, call us and we will tell you how to get a 10% discount on the repair.

☐ The technician noted concerns with your unit on the work order. Make sure to call the office and schedule the repair today! Ask us how to receive 10% off the repair.
