

Wave Across™

Now you can get the cleaning and polishing action of a side-to-side mitter, while side-stepping difficult space requirements! That's because the Wave Across™ packs a full-sized side-to-side mitter in just seven feet of space. With 12 dozen cloth strips, it delivers impressive cleaning and polishing action.

The six separate mitter baskets of the Wave Across™ work in perfect synchronicity, mesmerizing customers as the cloth tips dance across the vehicle surface. At the same time, operators love the low-maintenance design of the robust aluminum framework with lube-free nylon bearing pivot points.

To help ensure a long service life and extended ROI, the Wave Across™ also features a direct-drive motor and gearbox with a minimum of moving parts. Epoxy-coated and designed for wet environment operation, this drive unit delivers 'long haul' performance in even the most demanding wash tunnels.

With the 'built in' durability of the Wave Across™, there is little maintenance to be done except for the periodic replacement of the mitter cloth. And with the unique 'wave' mitter basket design, new cloth is firmly 'locked' in position, ready for more of the washing and polishing the Wave Across™ does best!
