

# KITCHEN PLANNER

Step 1: Measure your kitchen—no two kitchens are the same. Our kitchen cabinet representatives are experts in design and need exact dimensions to customize a new kitchen for you. On a separate piece of paper, create a rough drawing of your kitchen following these measuring guidelines.

Step 2: Measure the sink and window wall first. Start in the corner. Measure (in inches) at the edge of the window trim.

Step 3: Measure the window. Make the width from outside of trim to outside of trim. Mark locations of appliances, outlets, and light switches.

Step 4: Working clockwise, record all measurements of the room, noting any "breaks" such as doors, offsets, etc.

## Planning Details

1. This plan is for:
  - Remodeling  New Home
2. If you are remodeling, are you adding:
  - New wall/floor
  - Drywall or Finishing over existing wall
3. The age of your house is \_\_\_\_\_ years
4. Interior kitchen walls are:
